

Aperio ePathology NETWORK to Improve Communication among Pathologists, Pathology Sub-Specialists and Other Physicians

NETWORK enables pathologists to connect, collaborate, and concur with the care team like never before

VISTA, Calif. & OXFORD, England--(BUSINESS WIRE)--Aperio, the global leader in ePathology solutions, bringing digital pathology into standard practice, is showcasing their intuitive, easy-to-use solution that connects pathologists across geographical boundaries and enables enhanced communication across the patient care team. Whether at the office or on the go, the Aperio ePathology NETWORK provides the access pathologists need to stay connected and supports applications for intraoperative consultation, as well as internal and external consultation. The unveiling of the “Aperio ePathology NETWORK,” is taking place at the European Congress of Pathology on September 8-11 in Prague, and at CAP '12—The Pathologists' Meeting—in San Diego, September 9-12, 2012. Aperio expects to begin shipment of the new software to customers before the end of October.

“An additional benefit of the NETWORK is that those pathologists covering surgery centers can interpret intraoperative consultations remotely, reducing or eliminating travel.”

“Healthcare organizations are embracing ePathology, taking digital images into clinical use,” said Jared N. Schwartz, M.D., Ph.D., F.C.A.P., Aperio’s chief medical officer. “The Aperio ePathology NETWORK delivers a software solution that makes it easy to adopt ePathology into routine patient care by effectively connecting the care team across disparate hospital locations.”

“The Aperio ePathology NETWORK raises the bar in patient care by enabling very quick access to sub-specialty expertise for difficult cases. The patient has access to the right sub-specialist and the pathologist has peace of mind,” said Dr. Olga Ioffe, professor of pathology at the University of Maryland, School of Medicine. “An additional benefit of the NETWORK is that those pathologists covering surgery centers can interpret intraoperative consultations remotely, reducing or eliminating travel.”

Aperio will also launch its newest ePathViewer, an easy-to-use application for viewing eSlide images anywhere, at any time, via an iPad or iPhone. The Aperio ePathViewer will connect to the NETWORK and also supports several pre-configured websites including the Rosai Collection, Aperio eSlide Hosting and Aperio eSlideShare. The Aperio ePathViewer will be available in mid-September for download at the App Store.

We invite you to view the new Aperio ePathology NETWORK at ECP '12 booth #39 and CAP '12 booth #211.

About Aperio

For over a decade, Aperio has advanced the technology that enables glass slides to be digitized and securely shared with others. Aperio products are transforming the practice of pathology in hospitals, reference labs, and pharmaceutical and research institutions around the world. Aperio products are FDA cleared for specific clinical applications, and are intended for research and educational use for other applications. They are not approved by the FDA for primary diagnosis. The Aperio IOC solution should not be used when permanent sections on glass slides are not going to be available for a primary diagnosis. For clearance updates, specific product indications, and more information, please visit www.aperio.com.
