

# Whole-Slide Image Analysis Applications for Neuroscience

Steven Hashagen  
CEO, Indica Labs, Inc.

# Topics

- Indica Labs & Aperio Partnership
- Algorithm Integration
- Stain Separation
- Axon Quantification
- Microglial Activation Quantification
- Micro-hemorrhage Event detection
- Amyloid Plaque Counting – brightfield
- Amyloid Plaque Counting – fluorescence
- Product Demonstration
- Questions & Discussion

# Indica Labs & Aperio Partnership

Indica develops specialized image analysis software for leading digital pathology platforms, including Aperio's ScanScope platform.

Our application specific tools provide a unique complement to these general purpose whole slide imaging systems.

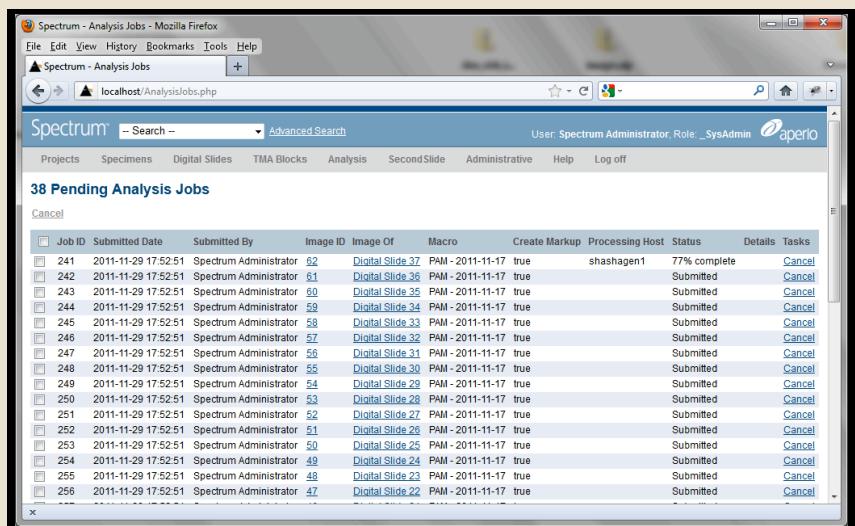

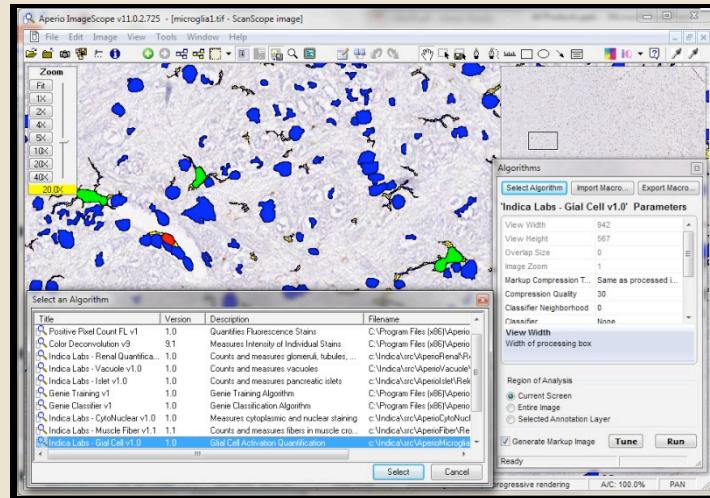

In March, 2012 Aperio became a distributor of Indica's Image Analysis software.

Indica customers include leading pharmaceutical companies, biotechs, CROs, and academic and government research centers.

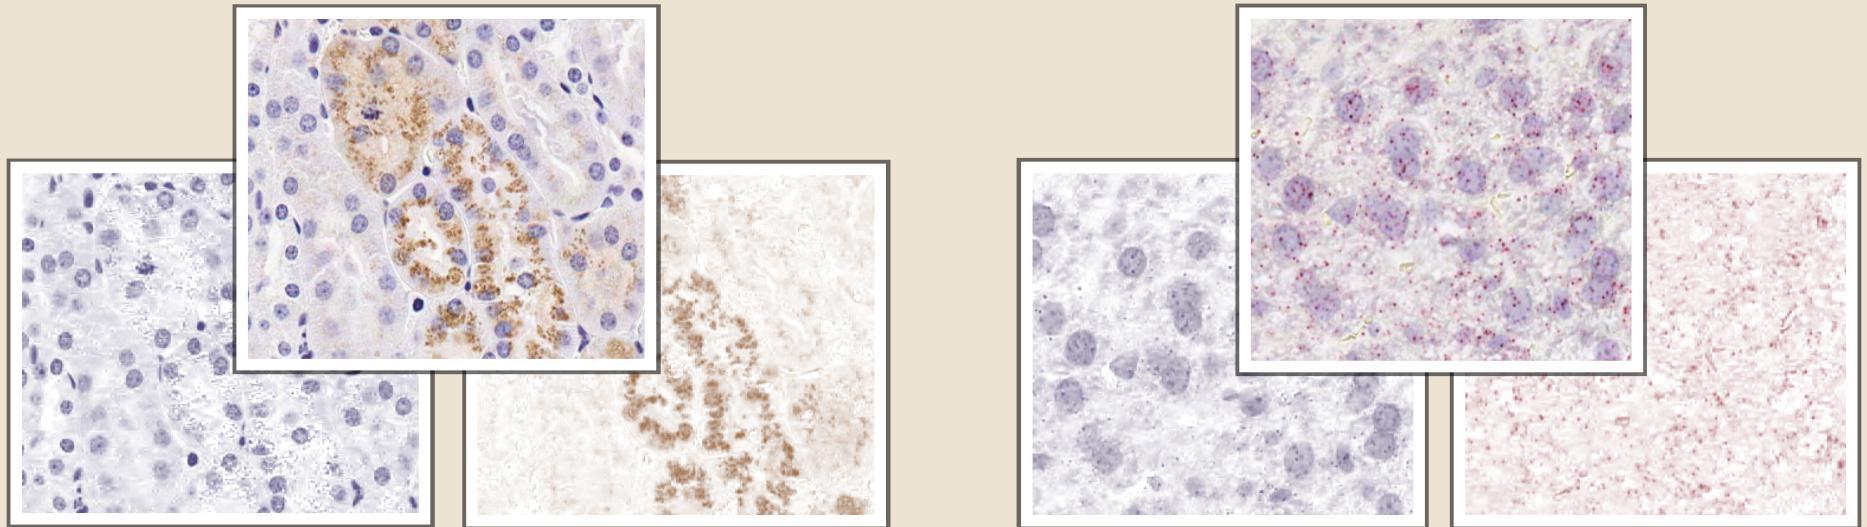

# Algorithm Integration

- Integrates seamlessly into Aperio's ImageScope and Spectrum
- Compatible with GENIE
- Compatible with TMALab
- User never leaves the Aperio environment. Generated data and images remain part of the Aperio environment.
- Compatible with a variety of other file formats including Mirax, Hamamatsu, Bioimagine, TIFF, JPG photomicrographs.

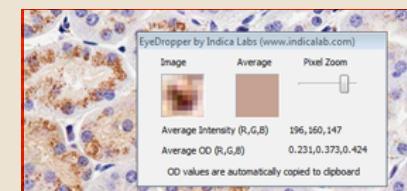

# Stain Separation

Separate nuclear stain from positive stain

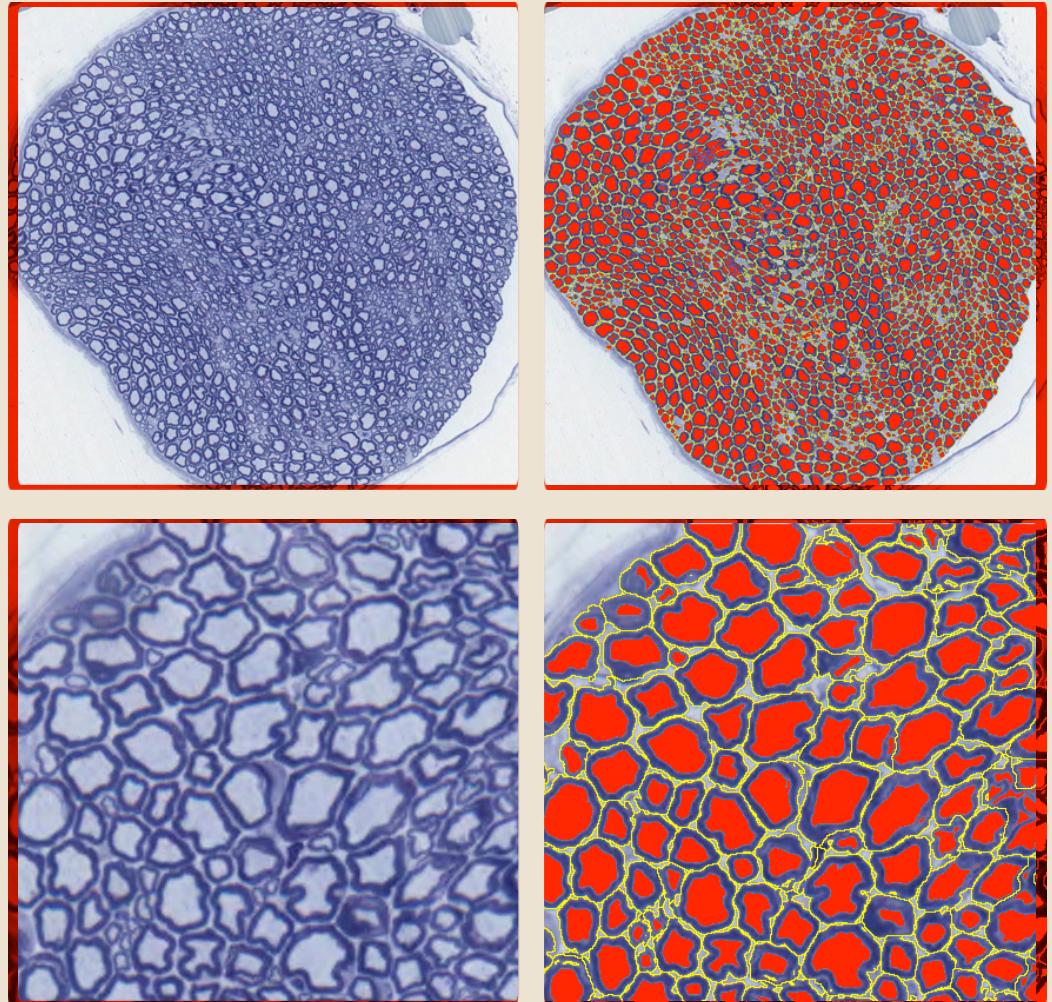

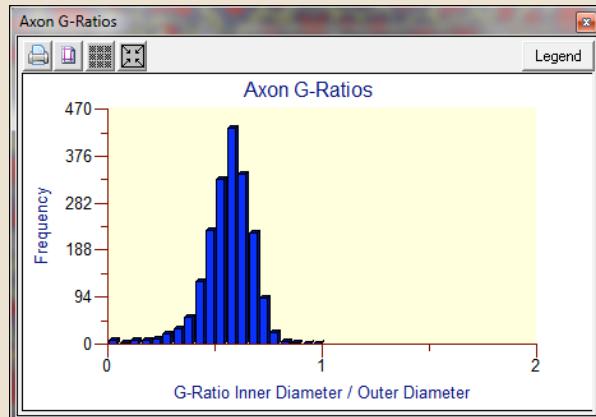

TIP: Use ImageScope eyedropper plugin to simplify  
stain selection. FREE download from [indicalab.com](http://indicalab.com).

# Axon Quantification

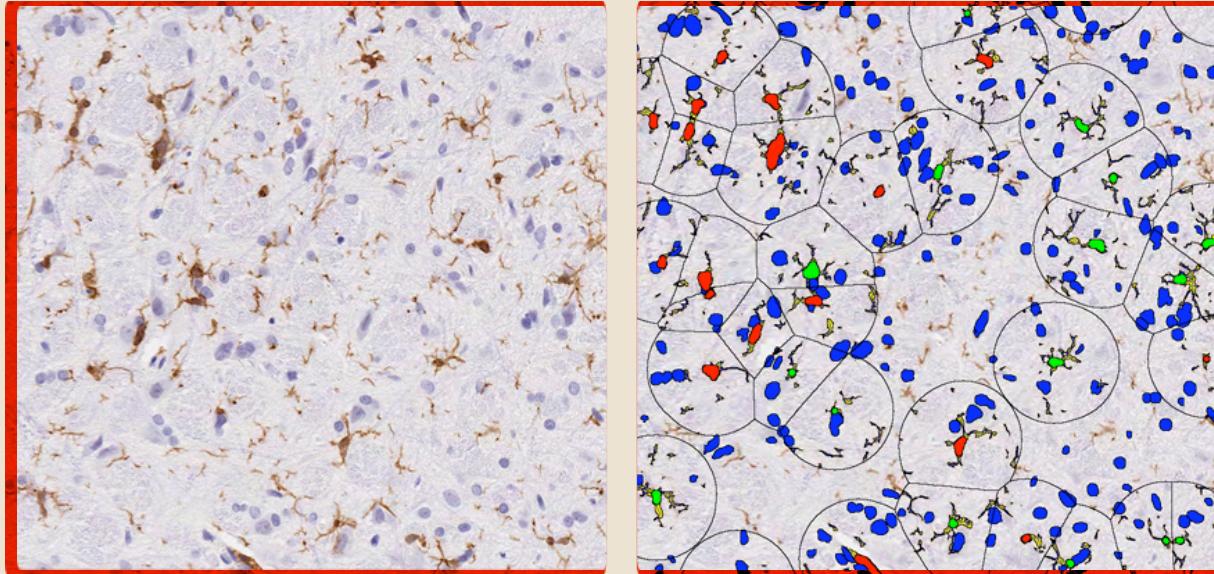

This tool reports:

- Total Axon Count
- Total Axon Area
- Total Myelin Area
- Average Myelin Thickness
- Average Axon inner & outer diameters
- **Average Axon G-Ratio**
- Axon G-Ratio Histogram

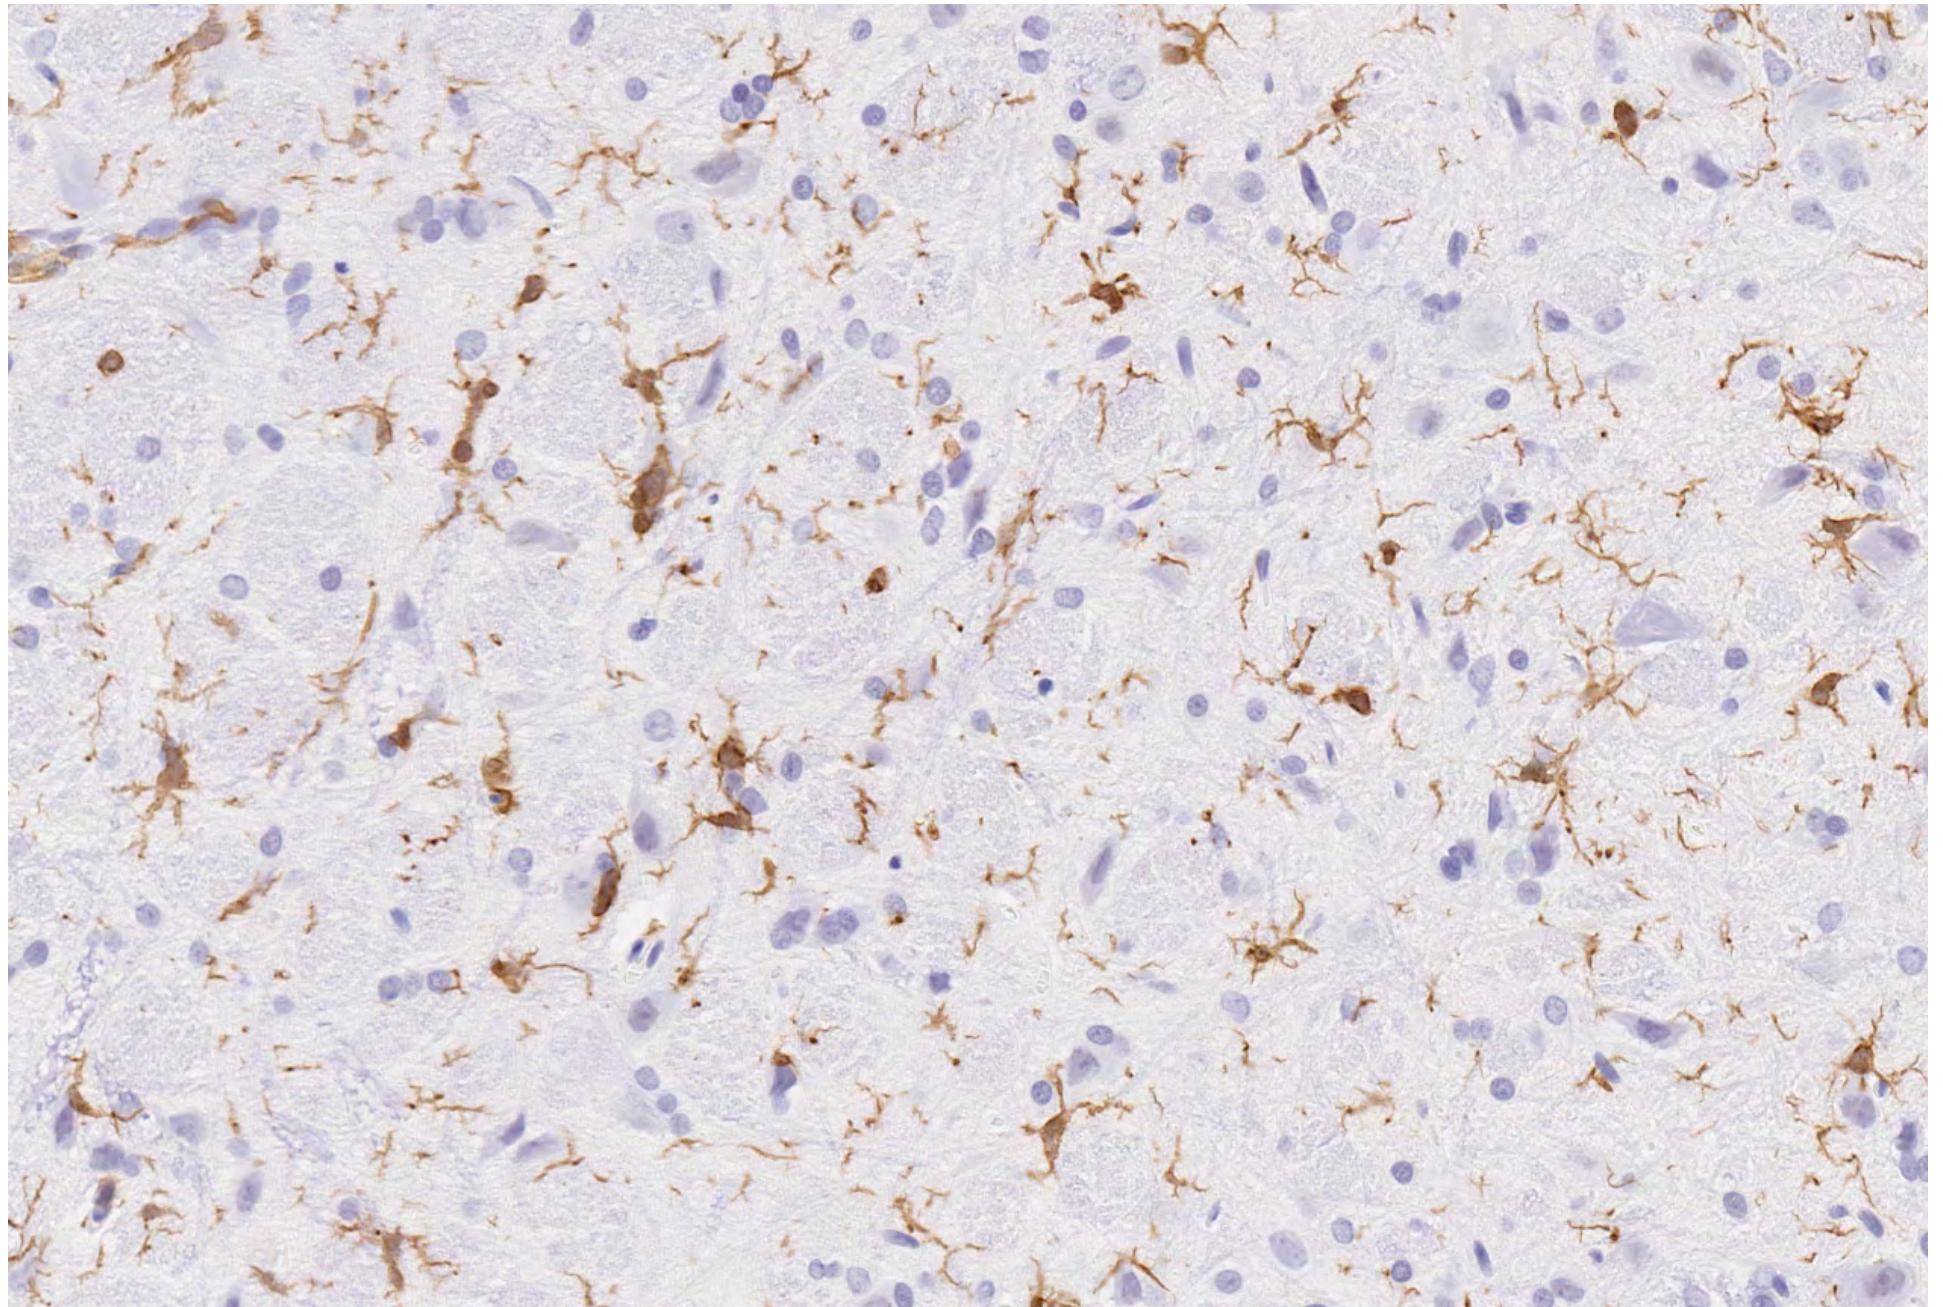

Sciatic nerve stained with toluidine blue

# Microglial Activation Quantification

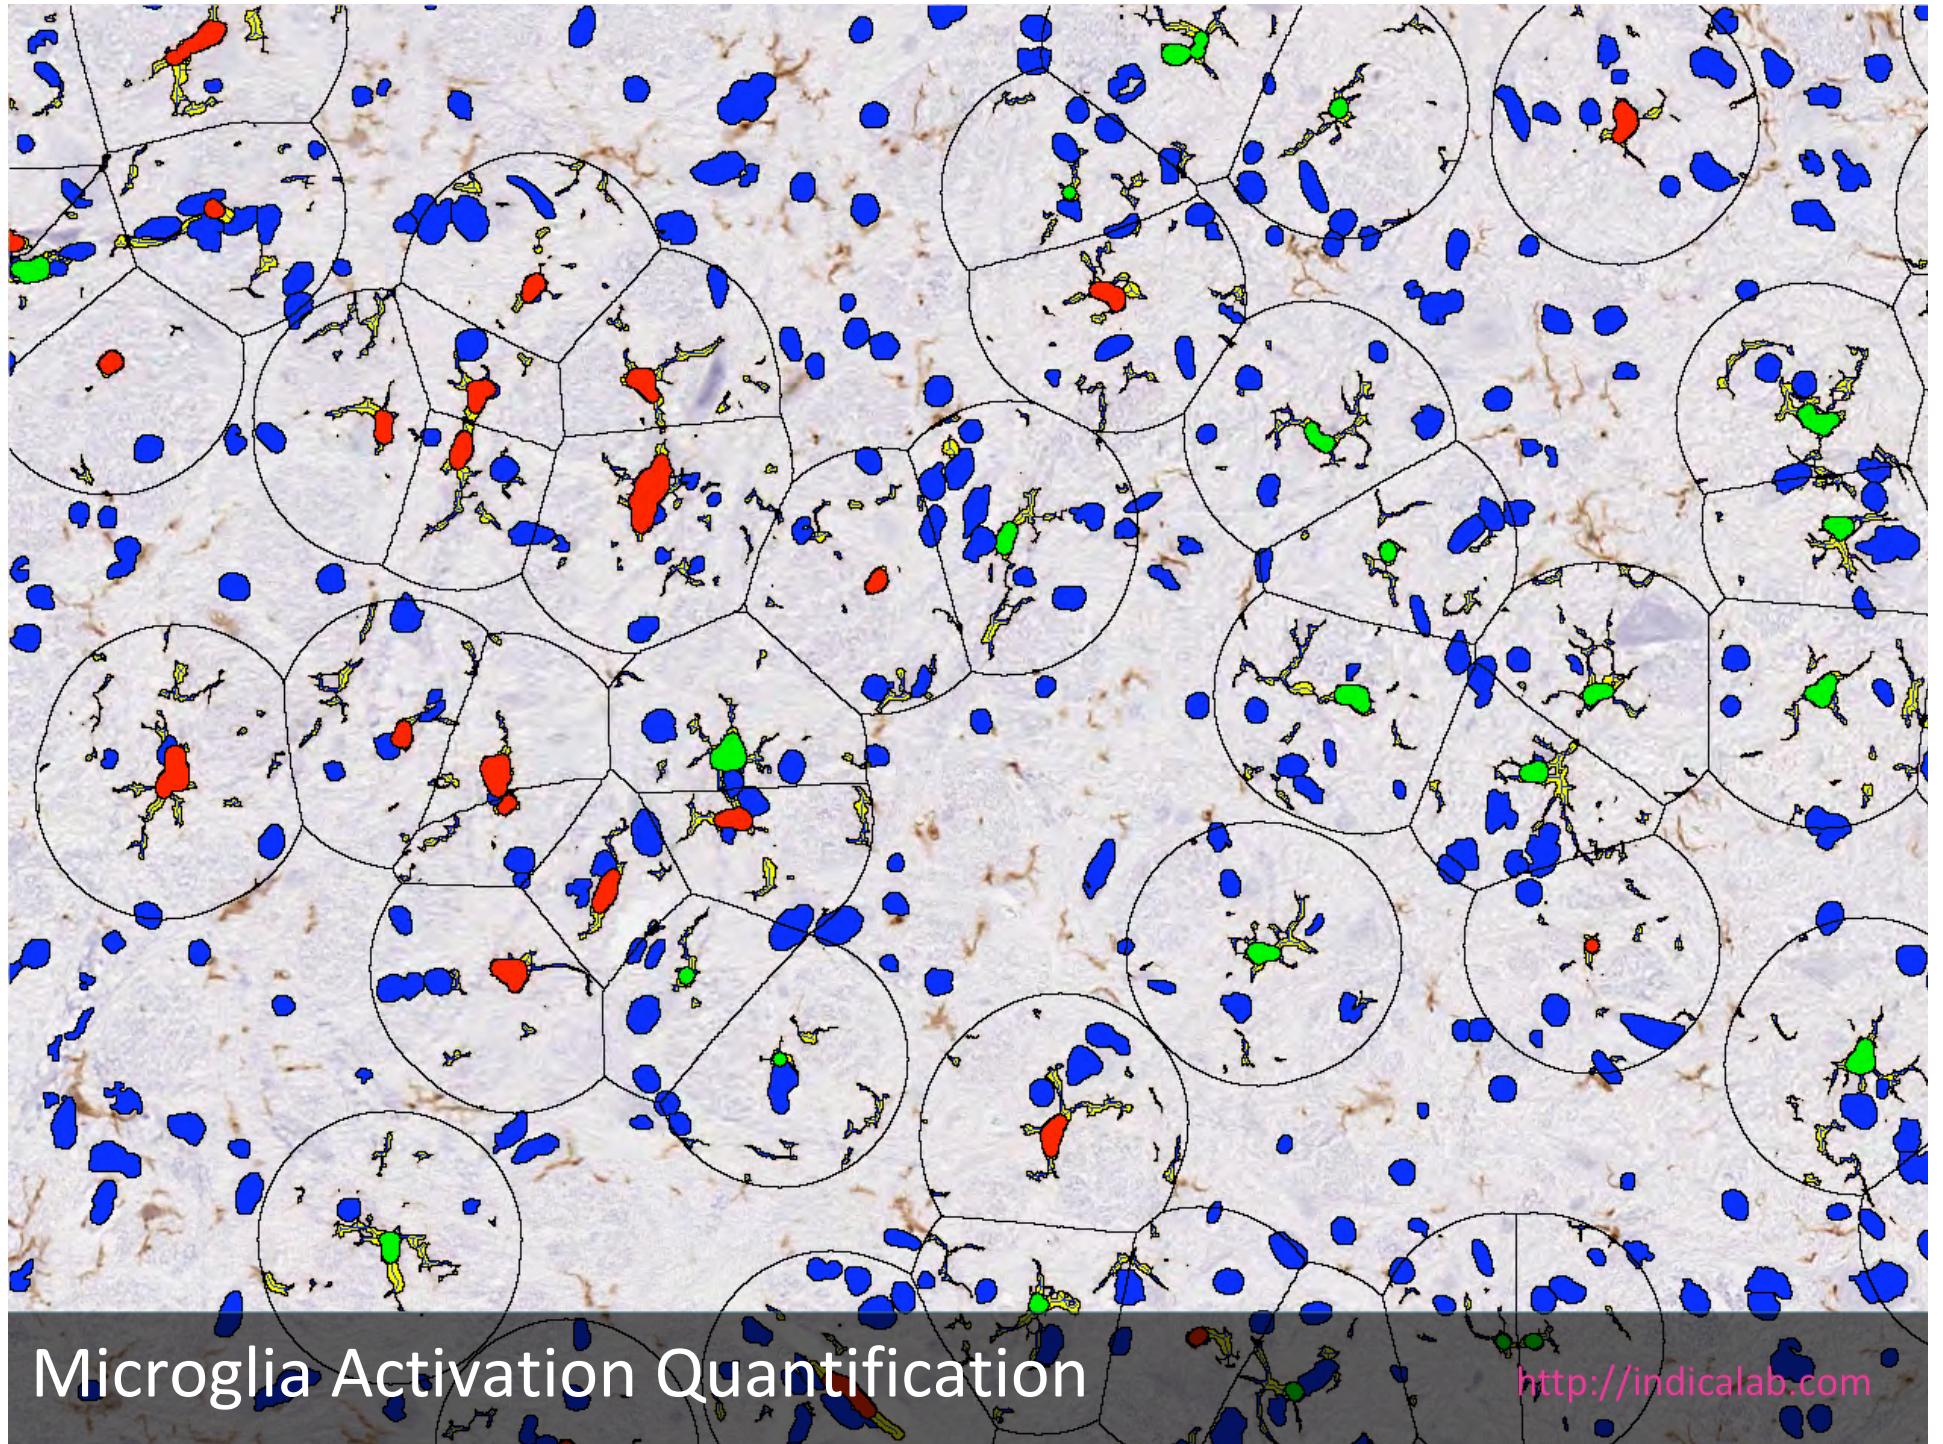

Measures microglial activation levels by reporting:

- Total non-glial cells
- Total glial cells (activated or resting)
- Total process length
- Total process area
- Average process thickness
- Average process length per cell
- Average process area per cell
